Information system

Interrelated components working together to collect, process, store, and disseminate information to support decision making, coordination, control, analysis, and visualization in an organization

Laudon and Laudon

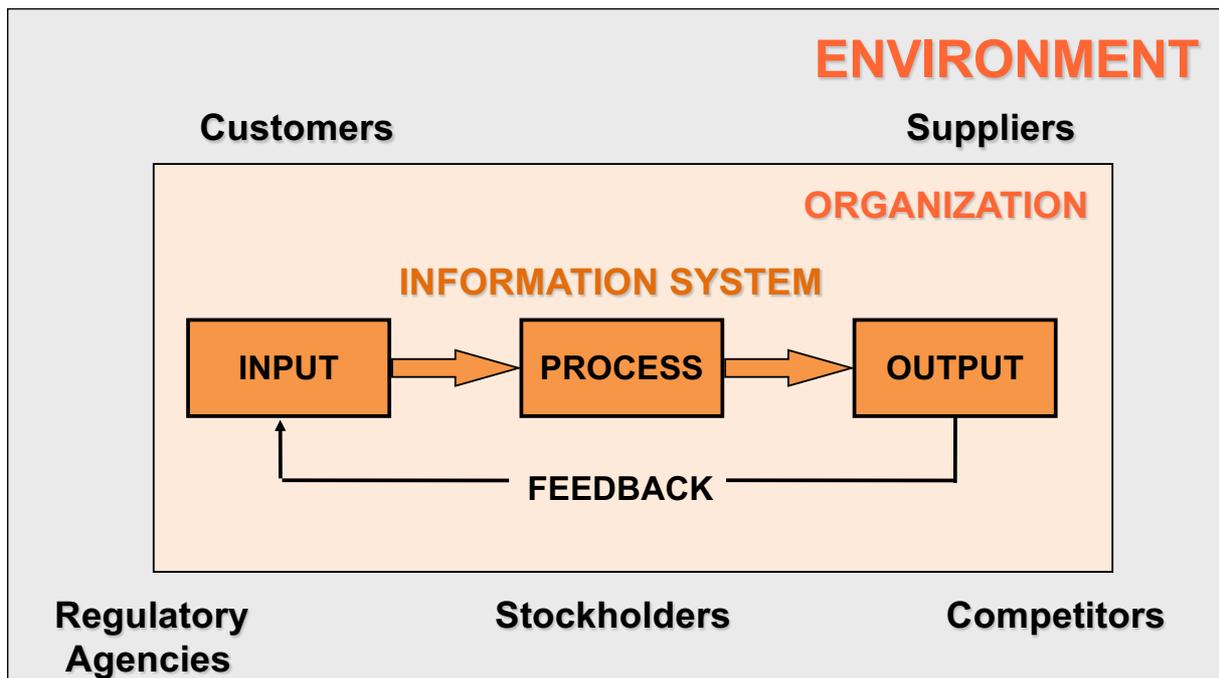

3

Information system

- IS – Definition, larger scope
 - ♦ System to store and process information used by organizations
 - Includes paper, people, computers and software
- (CB)IS – Definition, reduced scope
 - ♦ Computer based system to store and process information used by organizations
 - ♦ Also known as CBIS (Computer based IS)

4

IS high-level functions

5

IS high-level functions

- Input
 - ◆ The capture or collection of raw data from within the organization or from its external environment
- Output
 - ◆ The distribution of processed information to the people who will use it or to the activities for which it will be used

6

IS high-level functions

- Processing
 - ◆ The conversion, manipulation, and analysis of raw input in order to support activities in the organization
- Feedback
 - ◆ Output that is returned to the appropriate element of the organization to help them evaluate or correct input

7

Data vs. information

- Data
 - ◆ Streams of raw facts representing events occurring in organizations (e.g. business transactions) or the physical environment before they have been organized and arranged into a form that people can understand and use
- Information
 - ◆ Data that have been shaped into a form that is meaningful and useful to human beings in processes such as decision making

8

Material vs. Immaterial

Production	€€€€€€€€	€€
Reproduction	€€€€	€cent
Storage	€€	€cent
Transfer	€€	€cent
Transfer		⚡
Duration	Perishable	Eternal
Integration	Disconnected	Connected
Rivalry	Rivalrous	Non-rivalrous
Excludability	Maximum	Marginal
Return	Decreasing	Increasing

Adapted from: S.Quintarelli, "Capitalismo Immateriale" Bollati Boringhieri, 2019

Cost of memory

- RAM: 2.800\$ / Gbyte
 - ♦ <https://jcmit.net/memoryprice.htm>
- Hard disk: 0.019\$ / Gbyte
 - ♦ <https://jcmit.net/diskprice.htm>
- SSD: 0.080\$ / GByte
 - ♦ <https://jcmit.net/flashprice.htm>

- As of September 2020

Internet of Things (IoT)

- The Internet of Things (IoT) is the network of physical objects that contain embedded technology to communicate and sense or interact with their internal states or the external environment.

[Gartner]

Rivalry and Excludability

- Rivalrous goods, when consumed one party cannot be simultaneously consumed by others
 - ◆ Rivalrous: cars, parking slot, wood berries
 - ◆ Non-rivalrous: cinema, public park
 - A good or service is excludable if it is possible to prevent parties who have not paid for it from having access to it
 - ◆ Excludable: cars, parking slot, cinema
 - ◆ Non-Excludable: public park, wood berries
-

Rivalry and Excludability

	Excludable	Non-excludable
Rivalrous (subtractable)	Private goods	Common-pool resources
Non-rivalrous	Toll goods	Public goods

Diminishing returns

- Products or companies that get ahead in a market eventually run into limitations, so that a predictable equilibrium of prices and market shares is reached
 - ◆ Resource access (raw materials)
 - ◆ Market size
 - Typical of bulk material processing
-

Increasing returns

- If a product or a company or a technology—one of many competing in a market— gets ahead by chance or clever strategy, increasing returns can magnify this advantage, and the product or company or technology can go on to lock in the market.
 - Typical of high-tech industries
-

Increasing returns – factors

- Up-front Costs
 - ♦ R&D costs are large relative to their unit production costs
 - Network Effects
 - ♦ Products need to be compatible with a network of users
 - Familiarity and confidence
 - ♦ Products are complex, once users invest in training, they prefer to update skills for subsequent versions of the same product
-

Information Management

- Activity automation
 - ◆ Focus on productivity and substitution of work with technology
 - Decision support systems
 - ◆ Get the largest amount of information available as a basis to take decisions
 - ◆ Evaluate in the quickest and most precise way a high number of alternative decisions
-

Information costs and benefits

- Information management has measurable costs
 - ◆ Hw and sw, personell training, management
 - It is more difficult to determine the nature of the benefits deriving from the IS investments
 - Such benefits have different natures and more and more concern process automation and/or cost reduction
 - Nowadays the reduction of transaction and decision cost represents one of the central aspects of IS investments
-

Information System vs Computer System

- Information System:
 - ♦ Hardware +
 - ♦ Software +
 - ♦ Technical knowledge +
 - ♦ Organizational knowledge
 - Computer System: technical system related to the information system
 - ♦ only marginally focus of this course
 - The goal is to design and evaluate the Information System (not only the computer system)
-

Organizations

- People
 - ♦ Managers, knowledge workers, data workers, production or service workers
 - Structure
 - ♦ Organization chart, geography, groups of specialists, products
 - Business function
 - ♦ Specific task performed in a business organization
 - Business process
 - ♦ How activities are organized
-

Major business functions

- Manufacturing
 - Sales & marketing
 - Finance
 - Accounting
 - Human resources

 - Software integrates all facets
 - ◆ Planning, manufacturing, inventory, sales, finance, accounting
-

Business process

- The unique ways in which organizations coordinate and organize work activities, information, and knowledge to produce a product or service
-

Organization vs. Enterprise

- Organization: control structure that manages processes
 - E.g. enterprise, army, church, public administration, football team, hospital, university
 - ♦ Includes: people, structure, and goal
 - Enterprise: is a specific case of organization
 - ♦ Goods or services production, for profit
-

Common buzz about IS

- Technology:
 - ♦ The “latest version syndrome”
 - ♦ The “Modern Times syndrome” (emphasis on automation of often irrelevant operations)
 - ♦ The “Internet syndrome” (need of a web site)
 - ♦ The “App syndrome”
 - Economy:
 - ♦ “it doesn’t interest me much / it is not relevant”
 - Efficacy and ease of use:
 - ♦ “The user must learn how to use it and not resist the change”
-
